

ABSTRACT OF THE DISCLOSURE

The present invention provides a method for electronically setting credits and a system therefor wherein the rights of a membership having asset value, such as a golf membership, can be enjoyed while a credit line with this membership as security can be attained quickly over a network, and moreover, maximum use can be made of the asset value thereof as security. This method and system are constituted with a terminal device operated by the member, a membership management device possessed by the membership issuing organization, a credit line management device possessed by a credit granting organization, and an information brokering management device possessed by a credit brokering organization and connected with each of these devices through a telecommunications network.
